NSF Funds for Undergraduate Research

The National Science Foundation is seeking Undergraduate Students, especially Student Veterans, that they can fund research for.

The full information can be found at http://www.nsf.gov/pubs/2013/nsf13542/nsf13542.htm

The grant provides a variable amount of funding for researchers who currently have a grant from the National Science Foundation, or those who initiate a project involving undergraduate students. A new project must be in an area funded by the NSF. This grant is encouraged for both Student Veterans and Minority Students. The average amount of this grant is $70K-$120K, but there are no hard limits. This grant is for up to 5 years, and is open to any level undergraduate students.

The deadline is May 26th for projects needing access to Antarctica, and August 23rd for all others.

The Directorate of Biological Sciences is a division of the National Science Foundation.
