## ACKNOWLEDGEMENTS

---

We gratefully acknowledge the assistance of the following employees and volunteers who helped plant and maintain the research test gardens:

Cliff Alton	Ann Guhman	Girl Scout Troop #61
Edie Barbour	Becky Gutierrez	Sheri Layral
Sally Berry	Clare Hill	Gina Baker
Karen Binkley	Julie Houghton	Rebecca King
David Boyd	Laura Jacobs	Nicole Layral
Georgene Brennen	Thekla Johnson	Maria Chavez
Judy Bush	Sharon Lee	Sparrow Chavez
Bev Byington	Hope Lockwood	Natasha England
Fran Chauvin	Paula Lotspeich	 Girl Scout Troup #46
Patty Christian	Teresa MacDonald	Davya Baker
Susan Dearborn	Julia Martin	Sharon Baker
Floss Caskey	Mary Moriarty	Destiny Charlen
Kathy Davis	Jan Morrow	Candace Chase
Terrence Davis	Terri Nault	Erin Konefal
Tone Deehr	Deb Neumayr	Azara Mohammadi
Andrea Dick	Ria Peep	Ellen Olson
Catherine Eagan	Kathy Seim	Kalee Scholle
Barbara Fay	Cheryl Walker	Nora Smithhisler
Gayle Garrigues	Judy Webber	Emily Sousa
Ginger Gauss	Dan Wilson	Kaylan Wood
		Marni Zabel
		Tess Zabel

Special thanks to the following commercial businesses and individuals for donating seeds or plants to the garden:

Alaska Plant Materials Center  
Ball Seed Company  
W. Atlee Burpee Company  
Clause Seeds  
Mike Emmers  
Ginger Gauss  
Johnny's Selected Seeds  
New England Wildflower Society  
North Central Regional Plant Introduction Station  
Park Seed Company, Inc.

## Introduction

---

In 1989, a systematic evaluation of woody and herbaceous perennial landscape plants was begun at the University of Alaska Fairbanks Geogeson Botanical Garden (64°51'N, 147°52'W). These evaluations were expanded to include annual flowers in 1992 and ferns in 1993. The purpose of this research is to identify hardy perennials capable of surviving in subarctic environments; to evaluate the ornamental potential of perennials and annuals; and to fulfill a growing demand for information on landscape plant materials by homeowners, commercial growers, and landscapers.

The collection includes both indigenous and non-indigenous species that were obtained as plants or propagules from wild stands, botanical gardens, plant materials centers, commercial nurseries and seed companies in North America and the circumpolar North (Appendix 1). Plants are grown on a south-facing slope, elevation 475 - 487 feet. Soils are classified as Fairbanks silt-loam and have been cultivated since about 1910. All plants receive full sun except those located in the shade house (Plot No 1). Plants are watered with overhead irrigation as needed. Weed control is primarily by hand and rototiller.

The perennials are grown in the Herbaceous Perennial and Woody Ornamental Test Garden (see map on page 59). When available, ten plants of each herbaceous perennial ornamental are evaluated for a minimum of five years, and five plants of each woody landscape plant are evaluated for ten years. Subsequently, hardy perennials will be propagated and tested at other locations throughout the Interior and released for commercial propagation. Soils in the perennial test garden were amended with 1-2

inches of Lemeta peat in 1988. The perennial beds with the exception of the lily trials were fertilized with 500 lb per acre 10-20-20S fertilizer on July 10, 1994. Lilies received 1500 lb per acre 10-20-20S on July 11, 1994. Unless otherwise noted, plants received no special winter protection such as mulching or screening.

The annual flowers were grown in the Perennial Landscape and All America Selections Display Garden. Plants were grown in unreplicated beds and varied in number according to bed size. Soils were fertilized with 1500 lb per acre 10-20-20 prior to tilling. Planting occurred on June 1-3, 1994.

Weather data are compiled annually from a U.S. Weather Service station (elevation 475 ft) located approximately 350 ft west of the test garden. A summary of pertinent weather statistics for 1990 through 1994 is shown in Table 1.

## The 1994 season

---

Although injury from the severe 1992-93 season was still evident on many woody perennials, the effect in the garden was significantly diminished over last season. Perennials such as *Populus tremula* 'Erecta' showed very good regrowth from the crown, and the old European birdcherry trees (*Prunus padus*), had ample flowers and fruit. The 1994 season was a fairly good growing season except for prolonged rains in June. Measurable rainfall was recorded on all but one day between June 15 and June 29 for a total 3.29 inches. The cool, wet weather delayed flowering in the annual flower plots

and interfered with pollination on some fruit crops, particularly raspberries, causing low fruit yields and misshapen fruit.

The 1994 season also sported an overwhelming population of wasps, yellow jackets and aphids. Wasps and yellow jackets did not cause plant damage, but made working outdoors uncomfortable and often painful. Gardeners and commercial growers in the Tanana Valley, especially those located in wooded areas battled an ever-increasing population of wasps and yellow jackets until frost. Few people working outdoors made it through the season without being stung.

Both birch and birdcherry aphids were abundant in the Tanana Valley in 1994. They caused significant stunting on annual flowers such as calendula, godetia, helichrysum and verbena as well as herbaceous perennials (especially *Delphinium grandiflorum*) and many trees and shrubs. Native plants such as fireweed (*Epilobium angustifolium*), tilsley sage (*Artemisia tilesii*) and Nootka lupine (*Lupinus nootkatensis*) experienced severe damage to flowers and fruit. By mid August, aphids had developed wings. Visitors to the garden in early evening often were covered with aphids (especially if they happened to be wearing light-colored clothing) as clouds of insects billowed through the garden about six feet off the ground. Although no formal records have been kept on aphid populations, employees of the Agricultural and Forestry Experiment Station, some of whom have worked there since the mid 1970's cannot recall ever seeing as many aphids as in the 1994 season.

The annual flower gardens continue to be plagued by stem rot, *Sclerotinia sclerotiorum*, which devastated beds of snapdragons, lobelia, nemesia, petunias, and some sunflowers. We have been conducting experiments with a cold-tolerant strain of *Trichoderma* sp. in order to find a biological control for this disease. In 1993, we applied the *Trichoderma* once on July 7 as a soil drench to half of all petunia plots. This drench had no effect. In 1994, we conducted an experiment with *Prism Rose Halo* petunias grown on soils that were "salted" with stem rot sclerotia. Flats of petunia were drenched just prior to transplanting. A second group of plants received the pre-transplant drench and also weekly applications of *Trichoderma* throughout the growing season. These treatments were compared with a control (no treatment) and a fungicide treatment (Chipco 26019®). Neither the *Trichoderma* nor the fungicide gave adequate control of the stem rot. This experiment will be repeated in 1995 with greenhouse applications of *Trichoderma* drench.

## Plant Evaluation Tables

The information is summarized in four tables. Table 2 lists all the perennial plant materials currently being evaluated. Table 3 lists all perennials that have been evaluated but did not survive the minimum five-year evaluation period for herbaceous perennials and grasses or the minimum ten-year evaluation period for woody perennials. Table 4 lists current year's plantings of perennials that have not yet been evaluated for winter survival. Each of the three tables on perennials is further divided into four sections: herbaceous perennials, ornamental grasses, woody perennials, and ferns. Table 5 lists all

annual flowers that were evaluated in 1994.

## Explanation of Tables 2 through 4 (Perennials)

**NAME AND COMMON NAME:** The following references, listed in order, were consulted for scientific and common names.

- L.H. Bailey Hortorium. 1976. *Hortus III*. MacMillan Publishing Co., NY.  
Fernald, M.L. 1970. *Gray's Manual of Botany*. 8<sup>th</sup> ed. D. Van Nostrand Company.  
Hulten, NY. E. 1974. *Flora of Alaska and Neighboring Territories*. Stanford University Press, CA.  
Harkness, M.G. and D. D'Angelo, eds. 1986. *Bernard E. Harkness Seedlist Handbook*. Timber Press, Portland.  
Bluebird Nursery, Inc. 1990. Catalog. Clarkson, NE.

**SOURCE:** This column lists the private individual, botanical garden, agency, organization or commercial business that provided the plants or propagules. Complete names and addresses for the commercial sources and organizations are listed in Appendix 1.

**NUMBER OF PLANTS:** The total number of plants evaluated.

**WINTER INJURY:** A visual rating of winter injury was recorded each spring beginning in 1990. Data represent an average rating for the total number of plants evaluated using the scale listed below. Data are cumulative over all the years plants were evaluated.

- 0 = no visible injury  
1 = slight winter injury  
2 = moderate winter injury, recovery likely  
3 = severe setback from winter injury, recovery questionable  
4 = winterkilled

**HEIGHT AND SPREAD:** The maximum height and spread of herbaceous perennials and ornamental grasses and the average height and spread of woody landscape plants were recorded each summer. Some plants showed a significant difference in height between foliage and flowers/seed pods. For these plants, the first number listed is the foliage height, and the number in parentheses is the flower/seed pod height.

**FLOWERING PERIOD:** The flower symbol in each column denotes the weeks in each month when plants were flowering. For ornamental grasses, only the first observation of flowering is noted because the flowers are insignificant and the seed heads are usually present until snowfall. The fruit symbol in the woody landscape plants section indicates the weeks when ornamental fruits are present.

**FROST TOLERANT:** A plus sign in each column indicates that the foliage or flowers of a particular plant showed no obvious damage after several nights of below-freezing temperatures (to 28°F) in late August and early September). A negative sign means frost damage.

**Table 1.** Weather records for the test years.

**PLOT LOCATION:** The number in this column indicates the plot in the test garden where the specific test plants are located. Refer to the map on the back page of this publication for the physical location of each plot.

**NUMBER OF YEARS SURVIVED:** The total number of years that one or more of the evaluated plants survived. Causes of plant death could be winterkill, improper site conditions, inadequate or improper field management practices, or mechanical injury. Suspected cause for a particular species or cultivar, if known, is listed by code in the comments section. Codes are defined in a footnote at the bottom of each page.

### **Explanation of Table 5 (Annuals)**

**PLANT HEIGHT:** The average (most common) height of plants including flowers to the nearest inch was recorded in mid August, 1994. If height of individual plants or flowers differed by more than 2 inches, the range in heights from shortest to tallest was recorded.

**SPACING:** The recommended spacing is the distance between plants which provides good coverage but does not promote disease.

**BLOOM DATE:** Data on flowering were collected weekly beginning June 8, 1994. The \* symbol indicates first bloom, whereas the \*\* symbol indicates full bloom.

**BLOOM SIZE:** The maximum diameter to the nearest  $\frac{1}{4}$  inch of individual blossoms was recorded for flowers with single blossoms such as daisies, asters and pansies. Spike-type flowers such as snapdragons, lupine and salvia were recorded as length x width (i.e. 12 x 3\*) of the entire spike. The maximum diameter to the nearest  $\frac{1}{4}$  inch was recorded for all clustered flowers such as sweet alyssum and verbena. The measurements of spike and clustered flowers are identified by an “\*\*” notation following the measurement (i.e. 3\*\*).

**FROST TOLERANT:** Frost tolerance was evaluated on August 25 on foliage and flowers after an overnight low of 28°F on August 23 and 24, 1994.

**CUTTING:** A plus sign indicates this variety is suitable as a cut flower.

**DRIED:** A plus sign indicates this variety is suitable as a dried flower.

**COMMENTS:** The disease problems noted under comments refer to the fungal disease, Sclerotinia (cottony rot or white mold) unless otherwise noted. Sclerotinia infects many different types of flowers. Petunias and schizanthus are particularly susceptible. Plants eventually wilt due to blockage of the vascular tissue by small, hard, black fungal fruiting bodies. These fruiting bodies overwinter in the soil and re-infect plants in later years. The number of fruiting bodies present in the soil, as well as environmental conditions such as humidity and soil moisture, can affect the spread of the disease. Cultivars that showed no damage in 1994 are not necessarily resistant.

BLOOM COLOR	BLOOM SIZE (IN)	FROST TOLERANT	FLOWERS	FOLIAGE	FRAGRANT	CUTTING	DRIED	COMMENTS
rose pink	2 1/4		+	+			+	
blue	3 1/2*		-	-		+		excellent, good quality blooms
lavender blue/white centers	1/2		-	-				very nice, interesting color
white	1/4		+	+				good, needs heading
white	1*		+	+	+			excellent
mix - pinks, violet	1 1/4*		+	+				very good, a little disease
white	3/4*		-	-	+			very nice
blue	1/4		+	+				nice, airy effect
mix	4		-	-	+			very nice
mix- rose, pink, blue, white	5		+	+		+		spectacular blooms
mix - rose, pink, white	3 1/2		+	+				a few diseased plants, but rest excellent
white	3 3/4		-	+				excellent
violet	3 3/4		-	+				very nice
white/pink tips	3 3/4		+	+		+		late blooming
mix - rose, cream, blue, pink	4 1/2		+	-	+	+		half of the plants succumbed to disease
pink	1 1/4		-	-				bloom over fairly early
purple	1		+	+				very nice, finely cut foliage
white	1		+					lots of blooms, finely cut foliage
orange	2 3/4		+	+				needs heading, aphid problems
yellow	1 3/4		+	+				good, needs deadheading
mix - yellow, orange, gold	2 1/4		+	+		+		needs deadheading
mix	1 1/2		+	+		+		nice
orange	2 1/2		+	+		+		nice, needs heading
mix - red,white/pink flecks, peach, white	2 1/2		-	+	+			nice
mix - white, red, magenta, peach	2 1/4		-	+	+			excellent, nice colors
coral pink	1 3/4		-	+	+			very nice
rose pink	2 1/2		+	+	+			excellent
red violet	2		-	+	+			excellent
scarlet	2 1/2		-	+	+			very good
orange	5 3/4 x 1*		-	-			+	bronze foliage, not very vigorous this season
pink	3 3/4 x 1*		-	-			+	O.K., not a good year for celosia
orange/red	2 1/2 x 4 1/2*		-	-		+	+	
mix-red, yellow, rose	6 1/2 x 1 1/4*		-	-		+	+	disease problems, weak plants
red orange	5 x 1 1/4*		-	-			+	poor early survival
mix - scarlet, gold, pink, orange	3 1/2 x 3 1/2*		-	-				poor survival due to disease, surviving plants small but nice
scarlet	2 1/2 x 1*		-	-			+	deep red foliage, stunted plants
white	1 1/2		+	+				very similar to White Buttons
white	1		+	+				good
yellow	1 1/2		+	+				excellent
rose	10 x 6*		+	-		+		nice

BLOOM COLOR	BLOOM SIZE (IN)	FROST TOLERANT FLOWERS	FOLIAGE	FRAGRANT	CUTTING	DRIED	COMMENTS
medium rose	3 <sup>3</sup> / <sub>4</sub> *	+	+				very nice
scarlet	4*	+	+				excellent, could use deadheading
deep pink	3 <sup>1</sup> / <sub>2</sub> *	-	+				excellent, needs deadheading
rose	4 <sup>1</sup> / <sub>2</sub> *	+	+				vibrant color
rose - violet	4 <sup>1</sup> / <sub>2</sub> *	-	-				
bright pink	3 <sup>3</sup> / <sub>4</sub> *	-	+				excellent
hot orange	4*	-	+				excellent
light/deep rose	3	-	-		+		excellent in mid-season
mix-pink & red shades	2	-	-		+		excellent early, disease problems later
light pink/deep rose splotches	3	-	-		+		excellent
mix - pink, rose, lavender	2 <sup>1</sup> / <sub>2</sub>	-	-				excellent
mix	2	+	+		+	+	overgrown by surrounding varieties
mix - yellow, orange, red	2 <sup>1</sup> / <sub>2</sub>	+	+		+	+	may need staking, attractive to aphids
pink, coral	2 <sup>1</sup> / <sub>2</sub>	+	+		+	+	may need staking
blue	4 <sup>1</sup> / <sub>4</sub> x 5 <sup>1</sup> / <sub>2</sub> *	-	-				excellent
pink/wine	1 <sup>3</sup> / <sub>4</sub>	+	+				very nice, like a miniature hollyhock
white	3 <sup>1</sup> / <sub>2</sub>	-	-				excellent
rose	3 <sup>1</sup> / <sub>2</sub>	+	+				excellent
pink to rose	3 <sup>1</sup> / <sub>2</sub>	-	-				excellent early, disease problems later
mix-pink, yellow	4 x 1*	+	+				somewhat unkempt
blue	3/4	-	-				excellent, less disease than some of the other lobelias
deep blue	3/4	-	-				nice, disease problems late in season
deep blue	3/4	-	-				nice, disease problems late in season
red violet	3/4	-	-				more foliage than blooms
white	3/4	-	-				some blue-flowered plants, more disease than some other lobelias
white	1/4	-	-				mounding plants
mix	7 x 1 <sup>3</sup> / <sub>4</sub> *	-	+		+		nice, fairly uniform
mix	12 x 2 <sup>1</sup> / <sub>2</sub> *	-	+		+		gone to seed by end of season
mix - yellow, orange, gold	3 <sup>3</sup> / <sub>4</sub>	-	-				variable flower size
orange	3 <sup>1</sup> / <sub>2</sub>	-	-				large blooms, uniform, compact
yellow	3 <sup>1</sup> / <sub>2</sub>	-	-				large blooms, nice
orange	2	-	-				very nice
orange	2	-	-				very good
yellow	3 <sup>3</sup> / <sub>4</sub>	+	-		+		very nice
gold/orange	2	-	-				single blooms
lemon yellow	2	-	-				very nice, single blooms
gold/red	2 <sup>1</sup> / <sub>2</sub>	+	-				excellent
gold/red	2 <sup>1</sup> / <sub>2</sub>	-	-				
lemon yellow	2	-	-				crested flowers, very nice
yellow	4 <sup>1</sup> / <sub>2</sub>	-	-				excellent

pastel pink	3½	-	-				very nice early in season, disease problem later
deep rose/light throat	3	-	+				nice
deep red violet	2½	-	-				good, but disease problems
rose	3	+	+				succumbed to disease fairly early
rose/white	2½	+	+				plants somewhat variable, nice
pink, rose veins	2½						
true red	3½	-	-				intense color, except for disease problems in August, excellent
salmon pink	2¾	+	+				
mix-purple, rose, pink, coral	3	+	+				
deep blue	3	-	+				very nice, but disease problems
orchid	4	-	-				floppy flowers, disease problems late in season
magenta/white star	3						
salmon pink	2¾	-	-				
deep red violet	2¾	-	-				excellent early in season
blue	3	-	+				very nice
red violet	2½	-	-				very good, intense color
red/white edges	3¼	+	+				
coral	4	-	-				
purple	2½	+	+				very nice before hit by disease in August
rose	2¾	-	+				excellent, procumbent, spreads to 3 or 4 feet
magenta/white star	3½	+	+				very nice except for some disease problems
mix	1	+	+				similar to Polo Burgundy Star, but much larger flowers
mix	1	+	+	+			excellent
rose	1½	+	+		+		very nice
coral	1	+	+				nice
light lavender	1	+	+				excellent
pink/red flecks	2	-	+				very good, nice color
pink	1½	-	-				flower color variable, nice
mix	2	+	+				very good
purple	¼	-	-				nice colors
yellow/brown centers	5¾	+	+				attractive to bees, needs staking, unkempt by end of season
gold	7	+	+		+		large flowers, excellent
gold/brown centers	3½	+	+		+		very nice
golden yellow	6	+	+		+		excellent
gold/ brown centers	6	+	+		+		excellent, beautiful large flowers, seeds were started earlier than other rudbeckias
orange, gold, mahogany	4¼	+	+		+		excellent
mix	3	+	+		+		excellent, unique color
white	6¾ x 1*	+	+		+	+	beautiful colors, excellent early but diseased by the end of July
							very nice

BLOOM COLOR	BLOOM SIZE (IN)	FROST TOLERANT FLOWERS	FOLIAGE	FRAGRANT	CUTTING	DRIED	COMMENTS
deep lilac	3 x 1 1/2*	—	—				very nice overall
scarlet	12 x 1 1/4*	—	—		+		excellent, delicate flowers
scarlet	9x2*	—	—				
scarlet	4 x 3*	—	—				high losses from disease in August
deep blue	5 x 2*	+	+		+		very nice
dark red	2 x 6*	—	—			+	very good
salmon	5 3/4 x 1 1/2*	—					severely diseased
deep burgundy	3 1/4 x 2 1/4*	—					very good through July
scarlet	5 1/2 x 1 1/2*	—	—				disease problems in August
white	4 x 2*	—	—				disease problems started early in season
deep blue	6 x 1*	—	—				excellent
white/silver bracts	12 3/4 x 1 3/4*	+	+		+		attractive, subtle coloring
gold	1	+	+				nice
mix	1 1/4	—	—				very good earlier, disease problems later
white	3	+	+				poor foliage
white/yellow centers	3	+	+				excellent blooms, compact plants
lavender	2 1/2	—	—				interesting Chinese lantern-type pods
mix - white, yellow, orange	6x3*	—	—		+		good, nice colors, a little disease
orchid - rose	6x2*	+	+				very nice early, gone to seed later in season
yellow	6 1/2 x 2 1/2*	+	+				nice - best performance in July
peach/yellow	3 1/4 x 1 3/4*	+	+				lovely color, had disease problems by August
mix - pink, white, orange, yellow	4 1/2 x 2*	+	+				very nice early, gone to seed late in season
mix	10 x 2 1/2*	+	+		+		wonderful colors, double azalea flowered
white/purple	6 x 2 1/2*	+	+				nice early, gone to seed later
gold/pink	12x3*	+	+		+		nice tall spikes
light pink/rose	13x2*	+	+		+		very nice
clear yellow	14 x 2 1/2*	+	+		+		very nice
orchid	14 3/4 x 2 1/2*	+	+		+		very good
deep red	9 x 3*	+	+		+		very nice
white	15 x 2 1/2*	+	+		+		very nice
light yellow		+	+		+		excellent
bronze pink	10 1/2 x 2 1/4*	+	+				excellent early in season
rose	7x2*	+	+				nice early in season, goes to seed later
white/light rose	4 x 1 1/4*	+	+				early bloomer, still some blooms late in season
mix - yellow, orange, pink, rose	4 x 3*	+	+				excellent, good color mix, gone to seed late in season
mix - lavender, pink	4 x 4 1/2*	+	+		+	+	may need staking
mix	4 1/2 x 1*	+	+		+	+	best color mix for statice in trials
mix - lavender, blue, white	3 3/4 x 4*	+	+		+	+	
white	15 x 3 3/4*	+	+				very nice flowers, disease problems by August
white	24 1/2 x 6 1/2*	+	+		+		edible flowers, mostly double - good
