ACKNOWLEDGEMENTS

We gratefully acknowledge the assistance of the following employees and volunteers who helped plant and maintain the research test gardens:

Seth Adams	Gayle Garrigues	Jeremy Murphy
Ruby Baxter	Ginger Gauss	Terri Nault
Georgene Brennen	Larry Gaylord	Deb Neumayr
Bev Byington	Ann Guhman	Trish Patterson
Rea Calkins	Norma Haubenstock	Betty Pixley
Fran Chauvin	Jody Heflinger	Kerry Platzke
Taryn Colboch	Julie Houghton	Nicole Poirrier
Leanne Converse	Langston Hughes	Lou Rowinski
Kathy Davis	Thekla Johnson	Kathleen Salmon
Terrence Davis	Joanne Klumb	Kathy Seim
Susan Dearborn	Jim Kohler	Anne Sherman
Josh Donnelly	Deborah Koons	Ann Swift
Catherine Egan	Nola Kurber	Eileen VanWyhe
Morgan Floyd	Sharon Lee	Gail Walters
Gail Gardner	Theresa McDonald	Judy Weber

Mrs. Angiak's, Mrs. Bell's, Mrs. Ferri's and Mrs. White's Second Grade Classes, University Park Elementary School

Girl Scout Troops 46, 61, 101 and 158

The Salvation Army Sunbeams

Special thanks to the following commercial businesses and individuals for donating seeds or plants to the garden:

Ball Seed Company
Ginger Gauss
Harris Seeds
Johnny's Selected Seeds

INTRODUCTION

In 1989, a systematic evaluation of woody and herbaceous perennial landscape plants was begun at the University of Alaska Fairbanks Georgeson Botanical Garden (64°51'N, 147°52'W). These evaluations were expanded to include annual flowers in 1992 and ferns in 1993. The purpose of this research is to identify hardy perennials capable of surviving in subarctic environments; to evaluate the ornamental potential of perennials and annuals; and to fulfill a growing demand for information on landscape plant materials by homeowners, commercial growers, and landscapers.

The collection includes both indigenous and non-indigenous species that were obtained as plants or propagules from wild stands, botanical gardens, plant materials centers, commercial nurseries and seed companies in North America and the circumpolar North (Appendix 1). Plants are grown on a south-facing slope, elevation 475 to 487 feet (145 - 148 meters). Soils are classified as Fairbanks silt-loam and have been cultivated since about 1910. All plants receive full sun except those located in the shade house (Plot No 1). Plants are watered with overhead irrigation as needed. Weed control is primarily by hand and rototiller.

The perennials are grown in the Herbaceous Perennial and Woody Ornamental Test Garden (see map on page 53). When available, ten plants of each herbaceous perennial ornamental are evaluated for a minimum of five years, and five plants of each woody landscape plant are evaluated for ten years. Subsequently, hardy perennials will be propagated and tested at other locations throughout the Interior and released for commercial propagation. Soils in the perennial test garden were amended with 1-2

inches of Lemeta peat in 1988. The perennial beds received no fertilizer in 1996. Unless otherwise noted, plants received no special winter protection such as mulching or screening.

The annual flowers were grown in the Perennial Landscape and All America Selections Display Garden. Plants were grown in unreplicated beds and varied in number according to bed size. Soils were fertilized with 1500 lb per acre 10-20-20S prior to tilling. Planting occurred on May 30 and June 3-7, 1996.

Weather data are compiled annually from a U.S. Weather Service station (elevation 475 ft [145 m]) located approximately 350 ft (107 m) west of the test garden. A summary of pertinent weather statistics for 1992 through 1996 is shown in Table 1.

THE 1996 SEASON

Following a killing frost on Sept. 4, 1995 Interior residents were treated to a wonderfully balmy Indian Summer. Warm weather persisted into October, and many native plants began blooming. Winter arrived in mid October, and the succeeding months brought an extremely low accumulation of snowfall. The total accumulation through late January 1996 was only 6 inches (15.2 cm). During that time the minimum winter air temperature at the Garden reached -43°F (-42°C) in December and -48°F (-44°C) in January. As a result of the warm autumn and lack of snowfall, 33 percent of the experimental plants in the Garden were killed.

Damage could have been caused by failure of plants to fully acclimate, extreme winter desiccation or an inability to tolerate low temperature extremes in the absence of snow cover. Throughout the Interior, and as far south as Anchorage, businesses and homeowners had similar stories of extensive winterkill. Lawns were especially vulnerable, but many perennials did not survive. Even reliable species that had been cultivated in the Fairbanks area for more than 50 years were winterkilled.

Many perennials were killed outright, but others such as peony, grape hyacinth and some ferns showed significant root damage. In some instances, they did not begin to grow until mid July. Some species never recovered fully, and probably will not reappear in 1997.

Spring planting date for tender annual flowers and vegetable transplants is after June 1, the normal date of last spring frost. In 1996, temperatures on June 5 were 30.5°F (-0.5°C). Throughout the Interior, damage to annual flower and vegetable crops was extensive. Early summer was very dry, exacerbating recovery of injured plants. On the contrary, the latter half of the summer was cold and wet. The accumulated growing degree days rivaled the very short and cold 1992-93 season. Sweet corn did not mature and yield of warm season vegetables was reduced. Most flowers performed well despite the rains. Application of the fungicide Topsin M® mitigated the damage from soil-born diseases such as *Sclerotinia* stem rot.

The low snowfall, late spring frost, and cold, wet summer combined to make the 1996 season one that most people would rather forget. Gardeners are facing thousands of dollars in replacement costs for brown lawns and dead or injured landscape plant materials. We will repeat the evaluation of hundreds of perennials that did not receive adequate testing. Our list of comments on the possible reasons for plant losses (Table 3) now includes lack of snow cover.

PLANT EVALUATION TABLES

The information is summarized in four tables. Table 2 lists all the perennial plant materials currently being evaluated. Table 3 lists all perennials that have been evaluated but did not survive the minimum five-year evaluation period for herbaceous perennials and grasses or the minimum ten-year evaluation period for woody perennials. Table 4 lists current year's plantings of perennials that have not yet been evaluated for winter survival. Each of the three tables on perennials is further divided into four sections: herbaceous perennials, ornamental grasses, woody perennials, and ferns. Table 5 lists all annual flowers that were evaluated in 1996.

EXPLANATION OF TABLES 2 THROUGH 4 (PERENNIALS)

NAME AND COMMON NAME: The following references, listed in order, were consulted for scientific and common names.

Flora of North America editorial committee, eds. 1993 *Flora of North America*

- Vol. 2, *Pteridophytes and Gymnosperms*. Oxford University Press, NY.
L.H. Bailey Hortorium. 1976. *Hortus III*. MacMillan Publishing Co., NY.
Fernald, M.L. 1970. *Gray's Manual of Botany*. 8th ed. D. Van Nostrand Company.
Hulten, NY. E. 1974. *Flora of Alaska and Neighboring Territories*. Stanford University Press, CA.
Harkness, M.G. and D. D'Angelo, eds. 1986. *Bernard E. Harkness Seedlist Handbook*. Timber Press, Portland.
Bluebird Nursery, Inc. 1990. Catalog. Clarkson, NE.

SOURCE: This column lists the private individual, botanical garden, agency, organization or commercial business that provided the plants or propagules. Complete names and addresses for the commercial sources and organizations are listed in Appendix 1.

NUMBER OF PLANTS: The total number of plants evaluated.

WINTER INJURY: A visual rating of winter injury was recorded each spring beginning in 1990. Data represent an average rating for the total number of plants evaluated using the scale listed below. Data are cumulative over all the years plants were evaluated.

- 0 = no visible injury
1 = slight winter injury
2 = moderate winter injury, recovery likely
3 = severe setback from winter injury, recovery questionable
4 = winterkilled

HEIGHT AND SPREAD: The maximum height and spread of herbaceous perennials and ornamental grasses and the average height and spread of woody landscape plants were recorded each summer. Some plants showed a significant difference in height between foliage and flowers/seed pods. For these plants, the first number listed is the foliage height, and the number in parentheses is the flower/seed pod height.

FLOWERING PERIOD: The flower symbol in each column denotes the weeks in each month when plants were flowering. For ornamental grasses, only the first observation of flowering is noted because the flowers are insignificant and the seed heads are usually present until snowfall. The fruit symbol in the woody landscape plants section indicates the weeks when ornamental fruits are present.

FROST TOLERANT: A plus sign in each column indicates that the foliage or flowers of a particular plant showed no obvious damage after several nights of below-freezing temperatures (data recorded on Aug. 28 following minimum temperatures of 28°F and 27°F on the previous two days). A negative sign means frost damage.

PLOT LOCATION: The number in this column indicates the plot in the test garden where the specific test plants are located. Refer to the map on the back page of this publication for the physical location of each plot.

NUMBER OF YEARS SURVIVED: The total number of years that one or more of the evaluated plants survived. Causes of plant death could be winterkill, improper site conditions, inadequate or improper field management practices, or mechanical injury. Suspected cause for a particular species or cultivar, if known, is listed by code in the comments section. Codes are defined in a footnote at the bottom of each page.

EXPLANATION OF TABLE 5 (ANNUALS)

PLANT HEIGHT: The average (most common) height of plants including flowers to the nearest inch was recorded in late August 1996. If height of individual plants or flowers differed by more than 2 inches, the range in heights from shortest to tallest was recorded.

SPACING: The recommended spacing is the distance between plants which provides good coverage but does not promote disease.

BLOOM DATE: Data on flowering were collected weekly beginning June 7, 1996. The * symbol indicates first bloom, whereas the ☀ symbol indicates full bloom.

BLOOM SIZE: The maximum diameter to the nearest $\frac{1}{4}$ inch of individual blossoms was recorded for flowers with single blossoms such as daisies, asters and pansies. Spike-type flowers such as snapdragons, lupine and salvia were recorded as length x width (i.e. 12 x 3*) of the entire spike. The maximum diameter to the nearest $\frac{1}{4}$ inch was recorded for all clustered flowers such as sweet alyssum and verbena. The measurements of spike and clustered flowers are identified by an “*” notation following the measurement (i.e. 3*)

FROST TOLERANT: A plus sign in each column indicates that the foliage or flowers of a particular plant showed no obvious damage after several nights of below-freezing temperatures (data recorded on Aug 28 following minimum temperatures of 28°F and 27°F on the previous two days). A negative sign means frost damage.

CUTTING: A plus sign indicates this variety is suitable as a cut flower.

DRIED: A plus sign indicates this variety is suitable as a dried flower.

COMMENTS: The disease problems noted under comments refer to the fungal disease, Sclerotinia (cottony rot or white mold) unless otherwise noted. Sclerotinia infects many different types of flowers. Petunias and schizanthus are particularly susceptible. Plants eventually wilt due to blockage of the vascular tissue by small, hard, black fungal fruiting bodies. These fruiting bodies overwinter in the soil and re-infect plants in later years. The number of fruiting bodies present in the soil, as well as environmental conditions such as humidity and soil moisture, can affect the spread of the disease. Cultivars that showed no damage in 1996 are not necessarily resistant.

BLOOM COLOR	BLOOM SIZE (IN)	FROST TOLERANT FLOWERS	FOLIAGE	FRAGRANT	CUTTING	DRIED	COMMENTS
mix-orange,yellow,buff	2	+	+		+		excellent early, a little disease late in season
red violet	5x2 1/2*	-	+		+		excellent, grey-green foliage
lavender blue	2 3/4*	-	-		+		excellent
purple	1 1/4*	-	-				good, needs deadheading, some frost damage in June
white	3/4*	-	-				nice, some rain damage on blooms
mix-pink,purple,white	1*	+	+	+			very nice
white	3/4*	+	+	+			good, some disease
violet	4	-	+				excellent, covered with blooms
deep rose	4 1/2	-	+				very good
mix-rose,pink,white,purple	4	+	+		+		very nice blooms, but disease killed some plants
mix	3 1/2	-	+				excellent
white	3	+	+				excellent, but some rain damage on blooms
light yellow to cream	4	-	+				very nice, lots of blooms, rain damage on blooms in late Aug
mix-cream, rose, pink	5	+	+		+		excellent
pale lilac	5	-	+		+		interesting, but late, needs staking
violet blue/yellow & dark centers	1	+	+				good, spreading habit
pale apricot	2	+	+				nice color, needs deadheading
intense orange	2 1/2	+	+				very nice, needs deadheading
yellow	2	+	+				very nice, needs deadheading
red-orange/red reverse	2 1/2	+	+		+		great color, needs deadheading
bright red	1 1/2	-	+	+			very nice, would benefit from dead heading
mix	2 1/4	+	+	+			very nice, needs deadheading
salmon pink	2	-	+				excellent
deep pink	2	+	+	+			nice, but was damaged when driven over by truck
apricot	4x1/2*	-	-			+	bronze foliage, good, some disease in Aug
pink	2 1/4x1*	-	-			+	good, except damaged by June frost
mix-gold, red, orange	4x1*	-	-			+	good, does better in warmer weather
red-orange	4x2 1/2*	-	-			+	excellent, bronze foliage, frost damage in June
deep red	4 1/2x1 3/4*	-	-			+	very nice
scarlet	3x1*	-	-			+	performs better in warmer weather
yellow	1	+	+				excellent
white/yellow eye	1	+	+				very nice, a little disease late in season
pale pink	1	-	-		+		might perform better if plants were younger at transplant time
white	7x5*	-	+		+		very good, has thorns
mix-purple,white,rose	5x5*	-	+		+		nice, leaves yellowed, has thorns
gold	2	+	+		+		excellent
mix-pink,white,rose	3 1/4	-	-		+		very good, a little disease on blooms in Aug
white	3	+	+		+		nice, some disease on blooms in Aug
pale pink/darker centers	4	-	+		+		very nice
pink with rose centers	4 1/2	-	-		+		very nice

creamy white	3 1/2	-	-		+		excellent except for a little rain damage
mix-orange,yellow,gold	2 1/2	-	-				very good
white/yellow center	3/4	-	-				excellent
gold	1	+	+				nice, quite petite, frost damage in June
bright yellow	1 3/4	-	-				daisy-like blooms, nice, a little disease on foliage
mix-peach, yellow, tangerine	2 1/2	-	-				nice variegated foliage, pale flower colors
mix-orange, red, scarlet	2	-	-	+			
mix	2 1/2	-	-				very nice, flowers somewhat hidden by leaves
mix	1	-	-				excellent, wonderful colors
	1 1/4 (1/2)	+	+				okay
purple/white center	2	-	+				good
light salmon pink	2	-	+				very nice, attractive color
white	2 1/4	-	+				good
pale pink/dark pink back	2 1/4	-	+				very nice, little rain damage on blooms
pink	2 1/8	-	+				nice, some rain damage
bright rose	2 1/2	-	+				excellent, lots of blooms
			+				very nice, green leaves with pink in center
bright orange	2 1/2	+	+				nice, tall & spreading, but doesn't block weeds
mix	1 3/4	+	+				very good, ruffled flowers, disease on spent blooms late in season
purple/orange	2 1/2	+	+				excellent
light blue, purple/white face	2 1/4	+	+				very nice
intense orange	2	+	+				excellent
purple	2 3/4	+	+				excellent, except for a little rain damage on blooms
deep violet center,lighter to edges	2	+	+				excellent
mix	1 3/4	+	+				good mix
bicolor-deep & pale violet blue	2	+	+				nice, some plants all purple
pastel mix	2 1/4	+	+				excellent, wonderful colors
violet blue	2 1/2	+	+				very nice
deep yellow	2	+	+	+			excellent, uniform
pastel mix	2	+	+				excellent
white with yellow accents	2	+	+				very good
creamy yellow	2 3/4	-	+				very good, some resistance to rain damage
pale pink/yellow throat	2 1/2	+	+				very nice, although some disease
redviolet	2 1/2		+				nice, a little disease, few blooms after rains started
rose	2 1/2	-	+				
coral pink	2 1/2	-	+				nice, but fewer blooms than last year
lt. pink/white & yellow throat	1 1/2	-	+				dainty plants & blooms
pinkish lavender	2 1/2	-	+				excellent, good rain & disease resistance
lavender pink	2 3/4	-	+				very good, excellent weather tolerance, a little disease
deep violet blue	2 1/2	-	+	+			very good
