## ACKNOWLEDGEMENTS

We gratefully acknowledge the assistance of the following employees and volunteers who helped plant and maintain the research test gardens:

Edie Barbour	Cristina Greer	Donna Shelton
Gloria Beetus	Ann Guhman	Robert Shields
Julie Benioff	Becky Gutierrez	Faith Speakman
Sally Berry	John Hardy	Ann Swift
Karen Binkley	Jodi Hicks	Nora Webber
Matt Bottorff	W. Bruce Hoefer	Judy Webber
Judy Bush	Mindy Hunter	Ellen Wood
Bev Byington	Laura Jacobs	Girl Scout Troop #61
Kathy Davis	Audrey Johnson	Sheri Layral
Terrence Davis	Thekla Johnson	Gina Baker
Charles Deehr	Jennifer Jolis	Daniel Baker
Tone Deehr	Kay Collette Kindt	Davya Baker
Andrea Dick	Paula Lotspeich	Sharon Baker
Peter Dillingham	Timothy McLean	Amanda Bengtson
Catherine Eagan	Deb Neumayr	Heidi Burger
Barbara Fay	Kathy Nussbaumer	Leah Johnson
Gayle Garrigues	Ria Peep	Rebecca King
Ginger Gauss	Jana Peirce	Nicole Layral
Josh Gilbert	Gideon Schreiber	

Special thanks to the following commercial businesses and individuals for donating seeds or plants to the garden:

Alaska Plant Materials Center  
Ball Seed Company  
W. Atlee Burpee Company  
Clause Seeds  
Mike Emmers  
Ginger Gauss  
Johnny's Selected Seeds  
Kay Collette Kindt  
New England Wildflower Society  
North Central Regional Plant Introduction Station  
Park Seed Company, Inc.  
Risse Greenhouses  
Stokes Seeds, Inc.

## Introduction

---

In 1989, a systematic evaluation of woody and herbaceous perennial landscape plants was begun at the University of Alaska Fairbanks Geogeson Botanical Garden (64°51'N, 147°52'W). These evaluations were expanded to include annual flowers in 1992 and ferns in 1993. The purpose of this research is to identify hardy perennials capable of surviving in subarctic environments; to evaluate the ornamental potential of perennials and annuals; and to fulfill a growing demand for information on landscape plant materials by homeowners, commercial growers, and landscapers.

The collection includes both indigenous and non-indigenous species that were obtained as plants or propagules from wild stands, botanical gardens, plant materials centers, commercial nurseries and seed companies in North America and the circumpolar North (Appendix 1). Plants are grown on a south-facing slope, elevation 475 - 487 feet. Soils are classified as Fairbanks silt-loam and have been cultivated since about 1910. All plants receive full sun except those located in the shade house. Plants are watered with overhead irrigation as needed. Weed control is primarily by hand and rototiller.

The perennials are grown in the Herbaceous Perennial and Woody Ornamental Test Garden (see map on page 49). When available, ten plants of each herbaceous perennial ornamental are evaluated for a minimum of five years, and five plants of each woody landscape plant are evaluated for ten years. Subsequently, hardy perennials will be propagated and tested at other locations throughout the Interior and released for commercial propagation. Soils in the perennial test garden were amended with 1-2

inches of Lemeta peat in 1988. The perennial beds were fertilized with 300 lb per acre 10-20-20S fertilizer on July 15, 1993. Unless otherwise noted, plants received no special winter protection such as mulching or screening.

The annual flowers were grown in the Perennial Landscape and All America Selections Display Garden. Plants were grown in unreplicated beds and varied in number according to bed size. Soils were fertilized with 1000 lb per acre 10-20-20 prior to tilling. Planting occurred on June 2-4, 1993.

Weather data is compiled annually from a U.S. Weather Service station (elevation 475 ft) located approximately 350 ft west of the test garden. A summary of pertinent weather statistics for 1989 through 1993 is shown in Table 1.

## The 1993 season

---

**Coping with severe winter injury.** A significant number of perennials showed severe winter injury from the 1992-93 winter. This injury was the result of an unseasonably-late spring combined with a very early onset of winter. Plants began growth later than normal and did not have time to acclimate to the early onset of winter. Leaf color on the native birch (*Betula papyrifera*) and aspen (*Populus tremuloides*) trees had just begun to change from green to yellow, and the non-native trees such as the European birdcherries (*Prunus padus*) and non-native poplars (i.e. *Populus tremula 'Erecta'*) still were cloaked in bright green leaves when winter arrived.

The first permanent snowfall was recorded on September 12, 1993. The 13 inches of snow that accumulated in September were very wet and heavy. This snowfall caused extensive limb and trunk breakage and bark splitting primarily because leaves remained on the trees and held the wet snow. Because temperatures did not moderate after the first snowfall, green leaves froze on the trees. In less windy areas around the Tanana Valley, many trees held their leaves until the following spring.

The most visible damage in the botanical garden occurred to the large European birdcherry trees that had been planted in the 1930's. Besides severe trunk damage, significantly fewer leaves, flowers and fruit were produced the following season. Other plants considered very hardy in the Fairbanks area such as Tatarian honeysuckle (*Lonicera tatarica*) and the villosa lilac (*Syringa villosa*) were killed. Containerized plants that had received an early start in the greenhouse showed little winter injury. These plants apparently had enough time to fully acclimate following field transplanting, whereas many plants already in the field did not.

In contrast, the English Primrose, (*Primula vulgaris*), survived for the first time in the botanical garden. Apparently, the early snowfall provided a protective mulch for the primroses, possibly giving them a more protected, warm microenvironment to fully acclimate. They were blooming on April 22, the earliest non-native plant to bloom in the botanical garden.

**Stem rot disease on annual flowers.** Stem rot (*Sclerotinia sclerotiorum*) caused serious damage in the botanical garden during 1993. This disease is common in Alaskan soils and caused severe dieback on many cultivars of annual flowers including petunias, sunflowers, lavatera, schizanthus and marigolds. Normally, damage is minimized by application of the fungicide, Topsin M®. However, during the 1993 growing season we tested a possible biocontrol agent, a cold-tolerant strain of the fungus, *Trichoderma* sp., selected by Dr. Jenifer McBeath. This fungus is a soil antagonist and competes against other microorganisms in the soil. A single application of *Trichoderma* on July 7 did not control the disease. The application probably was too late to be effective.

**Fern testing.** In 1992, The Georgeson Botanical Garden was selected as one of six national satellite test gardens by the national Hardy Fern Foundation. These gardens evaluate native and non-native ferns for hardiness, site adaptability, cultivation requirements and plant growth and development. Information from all test sites is compiled by the Foundation for public distribution. Beginning with the 1993 season, the evaluations from the Georgeson Botanical Garden site will be included as a special section in the perennial landscape plant evaluations. Ferns were planted in the newly-completed shade house during the 1993 growing season, and formal evaluations will begin in 1994. In the future, ferns will also be located in the shade and wildflower gardens as these landscapes are developed.

## Plant Evaluation Tables

The information is summarized in four tables. Table 2 lists all the perennial plant materials currently being evaluated. Table 3 lists all perennials that have been evaluated

but did not survive the minimum five-year evaluation period for herbaceous perennials and grasses or the minimum ten-year evaluation period for woody perennials. Table 4 lists current year's plantings of perennials that have not yet been evaluated for winter survival. Each of the three tables on perennials is further divided into four sections: herbaceous perennials, ornamental grasses, woody perennials, and ferns. Table 5 lists all annual flowers that were evaluated in 1993.

## Explanation of Tables 2 through 4 (Perennials)

**NAME AND COMMON NAME:** The following references, listed in order, were consulted for scientific and common names.

- L.H. Bailey Hortorium. 1976. *Hortus III*. MacMillan Publishing Co., NY.  
Fernald, M.L. 1970. *Gray's Manual of Botany*. 8<sup>th</sup> ed. D. Van Nostrand Company.  
Hulten, NY. E. 1974. *Flora of Alaska and Neighboring Territories*. Stanford University Press, CA.  
Harkness, M.G. and D. D'Angelo, eds. 1986. *Bernard E. Harkness Seedlist Handbook*. Timber Press, Portland.  
Bluebird Nursery, Inc. 1990. Catalog. Clarkson, NE.

**SOURCE:** This column lists the private individual, botanical garden, agency, organization or commercial business that provided the plants or propagules. Complete names and addresses for the commercial sources and organizations are listed in Appendix 1.

**NUMBER OF PLANTS:** The total number of plants evaluated.

**WINTER INJURY:** A visual rating of winter injury was recorded each spring beginning in 1990. Data represent an average rating for the total number of plants evaluated using the scale listed below. Data are cumulative over all the years plants were evaluated.

- 0 = no visible injury  
1 = slight winter injury  
2 = moderate winter injury, recovery likely  
3 = severe setback from winter injury, recovery questionable  
4 = winterkilled

**HEIGHT AND SPREAD:** The maximum height and spread of herbaceous perennials and ornamental grasses and the average height and spread of woody landscape plants were recorded each summer. Some plants showed a significant difference in height between foliage and flowers/seed pods. For these plants, the first number listed is the foliage height, and the number in parentheses is the flower/seed pod height.

**FLOWERING PERIOD:** The flower symbol in each column denotes the weeks in each month when plants were flowering. For ornamental grasses, only the first observation of flowering is noted because the flowers are insignificant and the seed heads are usually

present until snowfall. The fruit symbol in the woody landscape plants section indicates the weeks when ornamental fruits are present.

**FROST TOLERANT:** A plus sign in each column indicates that the foliage or flowers of a particular plant showed no obvious damage after an over night low of +28.5°F on Sept. 18, 1993. A negative sign indicates frost damage.

**PLOT LOCATION:** The number in this column indicates the plot in the test garden where the specific test plants are located. Refer to the map on the back page of this publication for the physical location of each plot.

**NUMBER OF YEARS SURVIVED:** The total number of years that one or more of the evaluated plants survived. Causes of plant death could be winterkill, improper site conditions, inadequate or improper field management practices, or mechanical injury. Suspected cause for a particular species or cultivar, if known, is listed by code in the comments section. Codes are defined in a footnote at the bottom of each page.

## **Explanation of Table 5 (Annuals)**

**PLANT HEIGHT:** Data on plant height were recorded in late August 1993.

**SPACING:** The recommended spacing is the distance between plants which provides good coverage but does not promote disease.

**BLOOM DATE:** Data on flowering were collected weekly beginning June 9, 1993. The \* symbol indicates first bloom, whereas the ☀ symbol indicates full bloom.

**BLOOM SIZE:** The maximum diameter of individual blossoms was recorded. When followed by an \*, bloom size refers to maximum diameter of a flower cluster or spike.

**FROST TOLERANT:** Frost tolerance was evaluated on foliage and flowers after an overnight low of +28.5°F on Sept. 18, 1993.

**CUTTING:** A plus sign indicates this variety is suitable as a cut flower.

**DRIED:** A plus sign indicates this variety is suitable as a dried flower.

**COMMENTS:** The disease problems noted under comments refer to the fungal disease, *Sclerotinia* (cottony rot or stem rot) unless otherwise noted. *Sclerotinia* infects many different types of flowers. Petunias and schizanthus are particularly susceptible. Plants eventually wilt due to blockage of the vascular tissue and small, hard, black fungal fruiting bodies appear inside the vascular tissue. These fruiting bodies overwinter in the soil and re-infect plants in later years. The number of fruiting bodies present in the soil, as well as environmental conditions such as humidity and soil moisture, can affect the spread of the disease. Cultivars that showed no damage in 1993 are not necessarily resistant.

**Table 3.** All plants that have been evaluated but did not survive the minimum number of test years.

SCIENTIFIC NAME	COMMON NAME	SOURCE	DATE PLANTED	NUMBER OF PLANTS	NUMBER YEARS SURVIVED	COMMENTS
<b>HERBACEOUS PERENNIALS</b>						
<i>Aconitum volubile</i>	Monkshood	T&M	Sep-91	2	0	A
<i>Alchemilla alpina mollis</i>	Mountain ladysmantle	Park	Sep-91	10	0	A
<i>Anemone (Pulsatilla) patens</i>	Pasque flower	M. Earp	Aug-89	10	2	G
<i>Armeria</i> sp.		South Slope	Jun-91	3	0	A
<i>Arnica frigida</i>		C. Parker	Aug-89	18	2	G
<i>Arnica latifolia</i>	Broadleaf anemone	ANPS	Jun-90	10	1	F
<i>Arnica louiseana</i>		NEWFS	Jun-90	10	1	
<i>Artemisia Absinthium</i>	Common wormwood	Johnny's	Jun-91	10	1	
<i>Artemisia eriantha</i>		ARGS	Oct-90	3	1	
<i>Artemisia frigida</i>	Fringed sagebrush	Ft. Yukon, AK	Jun-91	10	0	A
<i>Artemisia Schmidtiana</i> 'Silver Mound'		Lamb	Jun-91	10	1	
<i>Aster alpinus</i> var. <i>vierhapperi</i>		NEWFS	Sep-91	4	0	A
<i>Calamintha Nepeta</i>		T&M	Jul-92	10	0	A
<i>Campanula rotundifolia</i>	Harebell	ANPS	Aug-89	9	2	G
<i>Centranthus ruber</i> 'Roseus'	Keys of Heaven	Park	Jul-92	10	0	A
<i>Cephalaria gigantea</i>		T&M	Jul-92	2	0	A
<i>Chrysanthemum arcticum</i> 'Schwefelglanz'	Arctic chrysanthemum	NCRPIS	Aug-90	9	1	F
<i>Cimicifuga racemosa</i>	Black snakeroot	T&M	Sep-91	4	0	A
<i>Clematis columbiana</i>	Columbian rock clematis	ANPS	Oct-91	1	0	A
<i>Cornus X unalaschkensis</i>		ARGS	Oct-91	2	0	B
<i>Delphinium grandiflorum</i> 'Blue Elf'		Harris Moran	Jul-91	10	0	A
<i>Delphinium</i> sp. 'Stand Up'		Park	Jul-91	10	1	
<i>Dianthus arenarius</i>	Sand pink	T&M	Jun-90	2	1	
<i>Dianthus armeria</i>	Deptford pink	NCRPIS	Jun-90	10	1	
<i>Dianthus capitatus</i>		NCRPIS	Jun-90	10	0	A
<i>Dianthus Freynii</i>		ARGS	Jun-90	6	2	
<i>Dianthus glacialis</i>	Ice pink	T&M	Jun-90	1	0	A
<i>Dianthus gratianopolitanus</i> 'T&M Hybrid Mix'	Cheddar pink	T&M	Jun-90	9	2	
<i>Dianthus gratianopolitanus</i> 'Elfin's Hat'	Cheddar pink	T&M	Jun-90	9	2	
<i>Dianthus plumarius</i>	Cottage pink	Novosibirsk, Russia	Aug-91	31	1	
<i>Dianthus plumarius</i>	Cottage pink	Novosibirsk, Russia	Aug-91	19	1	
<i>Dianthus plumarius</i> 'Ballad Blend'	Cottage pink	Stokes	Jul-91	10	0	A
<i>Dianthus plumarius</i> 'Sonate Double Mix'	Cottage pink	Park	Jul-91	10	0	A
<i>Dianthus superbus</i>	Lilac pink	NCRPIS	Jun-90	10	0	A
<i>Dodecatheon Meadia Album</i>	White shooting-star	ARGS	Jul-92	1	0	A
<i>Draba kamtschatica</i>		ANPS	Jul-91	10	1	H
<i>Dryas Drummondii</i>	Drummond dryad	ANPS	Aug-89	10	1	C
<i>Erigeron compositus</i>	Fernleaf fleabane	ANPS	Jun-90	10	1	

Key to Comments: A=did not survive first winter; B=mechanical injury caused loss; C=spring drought may have caused mortality; D=weak going into fall; E=every week after winter; F=late spring snow may have increased disease &/or mortality; G=may require better(faster?) drainage, H=high summer mortality; I = early record snowfall may have increased mortality.

SCIENTIFIC NAME	COMMON NAME	SOURCE	YEAR PLANTED	NUMBER OF PLANTS	NUMBER YEARS SURVIVED	COMMENTS
<i>Erigeron eriocephalus</i>	Fleabane	ANPS	Jun-90	10	0	A
<i>Erigeron purpuratus</i>	Fleabane	ANPS	Aug-89	10	1	B,C
<i>Eupatorium rugosum</i>	White snakeroot	NEWFS	Sep-91	2	0	A
<i>Geranium Endressii 'Wargrave'</i>	Endres cranesbill	VB&S	Jun-90	10	1	
<i>Geranium maculatum</i>	Wild geranium	NEWFS	Aug-91	10	0	A
<i>Geranium Renardii</i>		ARGS	Sep-91	4	0	A
<i>Geranium sanguineum</i>	Blood-red geranium	VB&S	Jun-90	6	1	
<i>Geranium sanguineum 'Album'</i>		ARGS	Sep-91	2	0	A
<i>Gypsophila cerastioides</i>	Mouse ear gypsophila	ARGS	Jun-90	8	0	A
<i>Gypsophila globulosa</i>		NCRPIS	Jun-90	10	0	A
<i>Hedysarum Mackenzii</i>	Wild sweet pea	ANPS	Aug-89	3	1	B,G
<i>Hedysarum Mackenzii</i>	Wild sweet pea	PMC	Jul-92	10	0	A,D,G
<i>Heuchera americana 'Palace Purple'</i>	Rock geranium	T&M	Jun-91	10	0	A
<i>Heuchera glabra</i>	Alumroot	ANPS	Jun-91	10	0	A
<i>Heuchera sanguinea 'Bressingham Hybrids'</i>	Coral bells	T&M	Jun-91	10	0	A

BLOOM COLOR	BLOOM SIZE (IN)	FROST TOLERANT FLOWERS	FOLIAGE	FRAGRANT	CUTTING	DRIED	COMMENTS
rose	1½	-	-			+	
lavender	3*	-	-		+		nice quality blooms, no browning in heads
lavender blue/white centers	3*	-	-				slightly different color, nice
blue	1-1½*	-	-				very compact, needs deadheading
white	1½*	-	-				nice, some browning of blooms
apricot	1*	+	+				unusual color, somewhat washed out
white	1¼*	+	+	+			very good
mix-pinks, violet	1¼*	+	+				excellent, nice colors
white	1*	-	-	+			good
white	1*	+	+	+			died out late in season
white	1	+	+			+	ok, somewhat sprawling habit
mix	5¼	-	+		+		huge flowers
mix	4	-	-	+			nice short aster, covered with blooms, needs deadheading
mix	5½	-	+		+		nice, spider-type flowers, needs staking
mix	4½	-	+				very nice, large flowers
white	3½	-	+				very nice, blooms discolor in rain
blue violet	3½	-	+				excellent, not as nice after rain
mix	4	-	-	+		+	very nice, petals swirl, needs staking
purple	1¼	+	+				good, somewhat stiff habit
white	1¼	+	?				good
yellow/green	1½ *	-	-				weak plants, possibly diseased
orange	2¼-2¾	+	+				large flowers, needs deadheading
orange	2¼	+	+				nice flowers, color, some disease problems
yellow	2	+	+				good, needs deadheading
mix	2	+	+				very nice, needs deadheading
mix	2	+	+		+		nice colors, bloom could be prolonged by deadheading
orange	2	+	+				nice, needs deadheading
mix-pink, purple, violet	1½*	-	-				best early in season
white	7 x 2½*	+	+				interesting form
mix	2½	-	+				nice, needs deadheading
scarlet	2-2½	-	+				excellent
orange	6*	-	-				orange tinge to foliage, very nice
mix-red, yellow, rose	5-10*	-	-		+	+	nice
mix-red, yellow, orange	5*	-	-				some loss from disease early, very nice later
mix	4*	-	-				some loss from disease early, excellent later on, nice colors
scarlet	6*	-	-		+	+	dark foliage, very nice after early disease problems
pink	4*	-	-				very nice
mix	2½	-	-				died out due to disease problems

BLOOM COLOR	BLOOM SIZE (IN)	FROST TOLERANT FLOWERS	FOLIAGE	FRAGRANT	CUTTING	DRIED	COMMENTS
white	1-1¼	+	+				very nice, forms mounds
yellow	1	+	+				very nice, blooms closed in cloudy weather
white	7*	-	+		+		nice, leaves stay green, be careful of thorns
mix-pink, rose, white	8*	-	-		+		nice, some yellowing of leaves, be careful of thorns
bright gold	2	-	+				excellent, needs deadheading
pink to rose	4¼	-	-		+		good blooms
scarlet/gold	1¾	-	-				very nice early, disease problems later
white/rose	3½	+	+		+		tall, smallish flowers, nice
mix-rose, pink, white	4-5	-	-				very good, large flower size
white	3	-	-				nice
red orange	2	-	-				nice finely cut foliage
deep pink	4	-	-		+		lots of blooms, very nice
mix	3-4	-	-				many flowers, single and double
mix	3-3½	-	-				good, dark foliage
mix	3¼-4	-	-				single flowers, nice colors, needs staking
mix	3¼-4	-	-				excellent, lovely blooms
bright rose	1¼	+	+				
red violet	1½	+	+				excellent
pink	1¾	+	+				some variation in color, good blooms
mix-red, coral, violet	1¼	+	+				excellent
crimson/dark centers	1¾	+	+				very nice
mix	1¼-1½	+	+				excellent, nice mix of colors
rose/white	1½	+	+				excellent, covered with blooms
pink	1¼	+	+				good
white	2	?	+				good, but dead flowers unattractive
mix-orange, white, salmon	2¾	+	+		+		except for disease problem, very nice
apricot	4½	+	+		+		good early, disease problems later
silver foliage			+				nice leaf shape
silver foliage			+				
silver foliage			+				excellent, cut foliage
silver foliage			+				finely dissected foliage, slightly uneven heights
rose/green leaves			+				more like a cabbage in form, nice color, size
white/green leaves			+				nice fringed foliage
rose/green leaves			+				
green leaves			+				
white/green leaves			+				
blue			+				started to bolt late August
rusty red	2½	-	+				nice early, but severe disease later in season
							severe disease problems, did not bloom
							very nice, unusual color

BLOOM COLOR	BLOOM SIZE (IN)	FROST TOLERANT FLOWERS	FOLIAGE	FRAGRANT	CUTTING	DRIED	COMMENTS
yellow	2	+	+				very nice
violet blue	2	+	+				
mix	1 3/4–2 1/2	+	+				excellent, pastel colors
rose/white throat	3	-	+				nice
mix	3 1/2	-	+				
deep rose	2 1/2–3	-	-				excellent color
rose/yellow centers	3	-	-				nice
red violet	3	-	-				nice
deep purple	2 3/4	-	+				seems to have some disease resistance
orchid	4	-	-				
burgundy/white	2 1/2	-	-				
salmon pink	2 1/2	-	+				nice clear salmon blooms
deep red violet	3	-	-				excellent early in season
red violet	3	-	-				very nice, rich color
coral	4 1/4	-	-				nice clear coral color
coral red/yellow throat	4	-	-				
orchid	4	-	-				possibly mislabeled, appears to be Orchid Daddy
rose	3	-	+				very nice, seems to have some disease resistance
magenta/white	3	-	-				wiped out by disease, very susceptible
mix	3/4–1	+	+				excellent
mix	1	+	+				excellent, good mix
mix	1	+	+				great impact from flowers, slightly unkempt appearance
salmon pink	1	+	+				excellent
rose	1	+	+				very nice, good color, covered with blooms
rose pink	7/8	-	+				
scarlet	2	-	-				ok
pale yellow	2	-	-				blooms closed in cloudy weather
red	2	-	-				
gold/brown centers	4	+	+				excellent, mostly doubles
gold/brown centers	3 1/2–4 1/2	+	+				excellent
orange, gold, brown	4 1/4	+	+				excellent, blooms double and single
white	6–7*	+	+				very good, uniform
coral /white	3–6*	-	-				lots of foliage, not very showy
scarlet	8 x 2 1/2*	-	-				nice foliage, delicate flowers
scarlet	5 x 2*	-	-				very nice, new blooms late in season
red	4 x 2 1/2*	-	-				new blooms late in season, some disease early
deep blue	6*	+	+				excellent
white	5*	+	+				good, but Argent was better
