INDIGENOUS EDUCATION RENEWAL IN RURAL ALASKA

Ray Barnhardt
Alaska Native Knowledge Network
University of Alaska Fairbanks

The Alaska Rural Systemic Initiative (AKRSI) was established in 1994 under the auspices of the Alaska Native/Rural Education Consortium, representing over 50 organizations impacting education in rural Alaska. The institutional home base and support structure for the AKRSI was provided through the Alaska Federation of Natives in cooperation with the University of Alaska, with funding from the National Science Foundation and the Annenberg Rural Challenge. The purpose of the Alaska Rural Systemic Initiative was to implement a set of initiatives that systematically documented the indigenous knowledge systems of Alaska Native people and developed pedagogical practices that appropriately integrated indigenous knowledge and ways of knowing into all aspects of education. In practical terms, the most important intended outcome was an increased recognition of the complementary nature of Native and western knowledge, so both can be more effectively utilized as a foundation for the school curriculum and integrated into the way we think about learning and teaching.

For any significant initiative aimed at improving education in rural Alaska, it is essential that we develop from the outset a working partnership of mutual respect and understanding between the Native and educational communities. The history of contradictions, confusion and conflict resulting from the coming together of two often incompatible cultural traditions and belief systems can best be overcome by drawing together the available expertise from each and exploring ways to arrive at an equitable synthesis. The first step in this endeavor was a series of colloquia on “Alaska Native Science Education” held in April, 1992 and May, 1993, sponsored by the Alaska Federation of Natives and the University of Alaska Fairbanks, with funding provided by the National Science Foundation. Topical areas that were addressed by the 60 broadly representative participants in the colloquia included Native
scientific traditions, western scientific traditions, science practices in various community and institutional settings, science curricula in schools and universities, science teaching practices, and science teacher training opportunities. Out of these discussions, an extensive set of recommendations were put forward regarding steps to be taken to improve the quality of science education, and education generally, for Alaska Native people. These recommendations then served as the impetus for the formation of the Alaska Rural Systemic Initiative educational reform strategy. To help put these interrelated issues into perspective, it is necessary to provide a brief overview of the cultural, geographical and political context in which the AKRSI initiatives were formed and implemented.

Rural Alaska

By most any standard, nearly all of the 586,000 square miles and 245 communities that make up the state of Alaska would be classified as “rural.” Approximately 40% of the 650,000+ people living in Alaska are spread out in 240 small, isolated communities ranging in size from 25 to 5000, with the remaining 60% concentrated in a handful of urban centers. Anchorage, with approximately 50% of the total population, is the only potential metropolitan area in the state. Of the rural communities, over 200 are remote, predominantly Native villages in which 70% of the 90,000+ Alaska Natives live and practice their numerous cultures (see following map of Alaska Native cultures and languages). The vast majority of the Native people in rural Alaska continue to rely on subsistence hunting and fishing for a significant portion of their livelihood, coupled with a slowly evolving cash-based economy, though few permanent jobs exist in most communities.

Rural Schools
Prior to 1975, the schools in rural Alaska were administered by either the federal Bureau of Indian Affairs or the Alaska State-Operated School System, both centrally administered systems oriented toward bringing Alaska Natives into mainstream society as their primary goal. The history of inadequate performance by the two centralized school systems, coupled with the ascendant economic and political power of Alaska Natives that derived from the passage of the Alaska Native Claims Settlement Act by the U.S. Congress in 1971, led to the dissolution of the centralized systems in the mid-1970’s and the establishment of 21 locally controlled regional school districts to take over the responsibility of providing education in rural communities. At the same time, a class-action lawsuit brought against the State of Alaska on behalf of rural Alaska Native secondary students led to the creation of 126 village high schools to serve those rural communities where high school students had to leave home previously to attend boarding schools.

Although the creation of the regional school districts (along with several single-site and borough districts) and the village high schools has provided rural communities with an opportunity to exercise a greater degree of political control over the educational systems operating in rural Alaska, it did not lead to any appreciable change in what is taught and how it is taught in those systems. The continuing inability of schools to be effectively integrated into the fabric of many rural communities after over 20 years of local control points out the critical need for a broad-based systemic approach to addressing the deficiencies in educational conditions in rural Alaska.

**Forging an Emergent System of Education for Rural Alaska**

In May, 1994 the Alaska Natives Commission, a federal/state task force that had been established two years earlier to conduct a comprehensive review of programs and policies impacting Native people, released a report articulating the critical importance of any effort aimed at addressing Alaska Native issues needing to be initiated and implemented from
within the Native community. The long history of failure of external efforts to manage the lives and needs of Native people made it clear that outside interventions were not the solution to the problems, and that Native communities themselves would have to shoulder a major share of the responsibility for carving out a new future. At the same time, existing government policies and programs would need to relinquish control and provide latitude for Native people to address the issues in their own way, including the opportunity to learn from their mistakes. It was this two-pronged approach that was at the heart of the Alaska Rural Systemic Initiative educational reform strategy -- Native community initiative coupled with a supportive, adaptive, collaborative education system.

This strategy required that we focus our attention on both the formal education system and the indigenous knowledge systems in rural Alaska. The culture of the formal education system as reflected in rural schools was poised to undergo significant change, with the main catalyst being culturally-based and place-based curriculum grounded in the local culture. In addition, the indigenous knowledge systems needed to be documented, articulated and validated, again with a major catalyst being place-based curriculum grounded in the local culture. With these catalysts in mind, we sought to implement a series of initiatives that stimulated the emergent properties of self-organization that were needed to produce the kind of systemic integration indicated above. To do so, it was essential that we work through and within the existing systems.

Our challenge was to identify the units of change that would produce the most results with the least effort. That meant identifying and targeting the elements of the system around which a renewed emergent order could coalesce. Once these critical agents of change were appropriately identified, a “gentle nudge” in the right places could produce powerful changes throughout the system. With these considerations in mind, the overall structure of the Alaska Rural Systemic Initiative was organized around a comprehensive set of initiatives (five funded by the National Science Foundation focusing on math and science, and five funded by the Annenberg Rural Challenge focusing on social studies and language arts). Each of these
initiatives was implemented in one of the five major Alaska Native cultural regions each year on an annual rotational scale-up schedule over a five-year cycle (which was renewed for a second five years). In this way, the initiatives could be adapted to the cultural and geographic variability of each of the regions, while at the same time engaging the state-level support structures throughout the five-year cycle.

Along with the rotational schedule of regional initiatives (which were expanded in Phase II of the AKRSI), there were also a series of cross-cutting themes that integrated the initiatives within and across regions each year. While the regional initiatives focused on particular
domains of activity through which specialized resources were brought to bear in each region each year (culturally aligned curriculum, indigenous science knowledge base, etc.), the following themes cut across all initiatives and regions each year:

1. Documenting cultural/scientific knowledge
2. Indigenous teaching practices
3. Culturally-based curriculum
4. Teacher support systems
5. Appropriate assessment practices

In this way, schools across the state were engaged in common endeavors that united them, at the same time that they were concentrating on particular initiatives in ways that were especially adapted to their respective cultural region. Each set of initiatives and themes built on each other from year to year and region to region through a series of statewide events that brought participants together from across the regions. These included working groups around various themes, Academies of Elders, Native educator associations, statewide conferences, the Alaska Native Science Education Coalition and the Alaska Native Knowledge Network.

The key agents of change around which the AKRSI educational reform strategy was constructed were the Alaska Native educators working in the formal education system, coupled with the Native Elders who served as the culture-bearers for the indigenous knowledge system, along with the Quality Schools Initiative adopted by the Alaska Department of Education. Together, these agents of change constituted a considerable catalytic force that has served to reconstitute the way people think about and do education in rural schools throughout Alaska. The role of the Alaska Rural Systemic Initiative was to guide and support these agents through an on-going array of locally-generated, self-organizing activities that produced the organizational learning needed to move toward a new form of emergent and convergent system of education for rural Alaska. The overall configuration of this emergent system may be characterized as two interdependent though previously separate systems being nudged together through a series of initiatives maintained
by a larger system of which they are constituent parts, as illustrated below.

The components of the emergent system, incorporating the indigenous knowledge sub-systems and the formal education sub-systems, were brought in contact with one another with an increasing level of two-way interaction, which slowly built the interconnectivity and complementarity of functions that was the goal of the reform strategy. Each of the initiatives associated with the two sub-systems, as represented above by the converging reform streams, served as a catalyst to energize the sub-systems in ways that reinforced the overall AKRSI efforts. For example, the Alaska Native Knowledge Network assembled and provided easy access to curriculum resources that supported the work underway on behalf of both the indigenous knowledge systems and the formal education systems. In addition, the ANKN newsletter, *Sharing Our Pathways*, provided an avenue for on-going communication between all elements of the constituent systems. Concurrently, the AKRSI collaborated with the Alaska Department of Education in bringing Native/science teachers together to develop performance standards based on the state science standards that took into consideration the
cultural context in which students acquired and demonstrated their knowledge. These performance standards then became part of the states performance assessment system to be implemented in all schools.

Together, these initiatives (along with other related activities) constituted the Alaska Rural Systemic Initiative and were intended to generate a strengthened complex adaptive system of education for rural Alaska that could effectively integrate the strengths of the two constituent emergent systems. Accepting the open-endedness and unpredictability associated with such an endeavor, and relying on the emergent properties associated with the adage, “think globally, act locally,” we were confident that we would know where we were going when we get there. It was the actions associated with each of the initiatives that guided us along the way, so that we could continue to move in the direction established by the AKRSI educational reform strategy.

**Intervention Activities: An Overview**

Following is a brief description of some of the key AKRSI-sponsored initiatives to illustrate the kind of activities that were implemented, as they relate to the overall educational reform strategy outlined above.

**Alaska Native Knowledge Network** - A bi-monthly newsletter, world wide web site (http://www.uaf.alaska.edu/ankn), publication center, and a culturally-based curriculum resources clearinghouse were established to disseminate the information and materials that were developed and accumulated as the AKRSI initiatives were implemented throughout rural Alaska.

**S.P.I.R.A.L. Curriculum Framework** - The ANKN curriculum clearinghouse identified and cataloged curriculum resources applicable to teaching activities revolving around 12 broad cultural themes organized on a chart that provides a “Spiral Pathway for Integrating Rural Alaska Learning.” The themes that make up the S.P.I.R.A.L. framework are family,
language/communication, cultural expression, tribe/community, health/wellness, living in place, outdoor survival, subsistence, ANCSA, applied technology, energy/ecology, and exploring horizons. The curriculum resources associated with each of these themes can be accessed through the ANKN website.

**Cultural Documentation/Atlases** - Students in rural schools interviewed Elders in their communities and researched available documents related to the indigenous knowledge systems, and then assembled the information they gathered into a multimedia format for publication as a “Cultural Atlas” available on CD-ROM and the Internet. Documentation focused on themes such as weather prediction, edible and medicinal plants, geographic place names, flora and fauna, moon and tides, fisheries, subsistence practices, food preservation, outdoor survival and the aurora.

**Native Educator Associations** - Associations of Native educators were formed in each cultural region to provide an avenue for sustaining the initiatives being implemented in the schools by the AKRSI. The regional associations sponsored curriculum development work, organized Academies of Elders and hosted regional and statewide conferences as vehicles for disseminating the information that was accumulated.

**Native Ways of Knowing** - Each cultural region engaged in an effort to distill core teaching/learning processes from the traditional forms of cultural transmission and to develop pedagogical practices in the schools that incorporated these processes (e.g., learning by doing/experiential learning, guided practice, detailed observation, intuitive analysis, cooperative/group learning, listening skills).

**Academies of Elders** - Native educators convened with Native Elders around local themes and a deliberative process through which the Elders shared their traditional knowledge and the Native educators sought ways to apply that knowledge to teaching various components of a culturally-based curriculum. The teachers then field-tested the curriculum ideas they had
developed, brought that experience back to the Elders for verification, and then prepared a final set of curriculum units that were pulled together and shared with other educators.

**Cultural Standards** - A set of “Alaska Standards for Culturally Responsive Schools” were developed for students, teachers, curriculum, schools and communities that provided explicit guidelines for ways to integrate the local culture and environment into the formal education process so that students are able to achieve cultural well-being as a result of their schooling experience.

**Village Science and Village Math Curriculum Applications** - Three volumes of village oriented science and math curriculum resources were developed in collaboration with rural teachers for use in schools throughout Alaska. These resources serve as a supplement to existing curriculum materials to provide teachers with ideas on how to relate the teaching of basic science and math concepts to the surrounding environment.

**AISES Chapters/Native Science Fairs** - K-12 chapters of the American Indian Science and Engineering Society were formed in rural districts serving each cultural region. These chapters participated in AISES Science Camps and sponsored Native Science Fairs in which the projects are judged for their science content by experienced science teachers and for their cultural content by Native Elders. The winners of the regional fairs attend the Alaska State Science Fair in the Spring.

**Alaska Native Science Education Coalition** - The ANSEC was made up of representatives from over 20 agencies, professional organizations and other programs that have an interest and role in science and math education in rural Alaska schools. The Coalition brought its vast array of curriculum and professional development resources into focus around the implementation of place-based and culturally-based science curriculum, including the incorporation of rural/cultural considerations in the Coalition members own materials and practices (e.g., Alaska Science

**Math/Science Performance Standards** - Performance standards in the areas of math and science were developed to serve as benchmarks for the state assessment system in those content areas. Through AKRSI support, representation from rural/Native communities helped to incorporate the various cultural and geographic perspectives needed to provide equity in the assessment process.

**Have We Made a Difference?**

As the Alaska Rural Systemic Initiative completed its ten-year trajectory, data gathered from the 20 rural school districts we worked with (compared to 24 other rural districts) indicated that the educational reform strategy we had chosen -- to foster interconnectivity and complementarity between the formal education system and the indigenous communities being served in rural Alaska -- had produced an increase in student achievement scores, a decrease in the dropout rate, an increase in the number of rural students attending college, and an increase in the number of Native students choosing to pursue studies in STEM fields (science, technology, engineering and math). The initiatives outlined above demonstrated the viability of introducing strategically placed innovations that can serve as catalysts around which a new, self-organizing, functionally-integrated educational system can emerge which shows signs of producing the quality of learning opportunity that has eluded schools in Native communities for over a century. The substantial realignments that are evident in the increased interest and involvement of Native people in education in rural communities throughout Alaska point to the efficacy of a systemic approach in shaping reform in educational systems.

While the original NSF funding of the Alaska Rural School Initiative served as the catalyst for the core reform strategy, we were fortunate to acquire substantial supplementary funding to address areas for which the RSI funds were not suitable, such as indigenous curriculum materials
development (from the NSF Division of Instructional Materials Development), and implementing comparable initiatives to those of the AKRSI in the areas of social studies, fine arts and language arts (from the Annenberg Rural Challenge). All of these funds were combined to provide an opportunity to address the issues facing schools in Native communities throughout rural Alaska in a truly comprehensive and systemic fashion.

As a means to help document the process of systemic reform in rural schools, we joined in two projects that produced comprehensive case studies of educational practices and reform efforts in nine rural communities/schools in Alaska. Seven of the case studies were funded through the Northwest Regional Educational Laboratory by a field-initiated grant from the National Institute for At-Risk Youth under USDOE, and the other two were administered by Harvard University through a grant from the Annenberg Foundation. Since all of the communities were in school districts associated with the Alaska Rural Systemic Initiative, we were able to obtain a good cross-section of in-depth data on the impact of the AKRSI reform effort over the ten years of its existence.

Throughout these initiatives we were mindful of the responsibilities associated with taking on long-standing, intractable problems that have plagued schools in indigenous settings throughout the world for most of the past century, and we made an effort to be cautious about raising community expectations beyond what we could realistically expect to accomplish. We were also mindful of the larger context in which the AKRSI was situated and the expectations of the funding agencies with mandates to support initiatives that can contribute to a larger national agenda. Our experience was such that we were confident in the route we chose to initiate substantive reforms in rural schools serving Alaska’s Native communities, and while we expected to encounter plenty of problems and challenges along the way, we capitalized on a broadly supportive climate to introduce changes that have benefited not only rural schools serving Native students, but have been instructive for all schools and all students. We continue to explore these ideas and find ways to strengthen and renew the educational systems serving people and communities throughout our society.
