

BROCCOLI

Nutrition and Health

Broccoli provides vitamins A and C and calcium. It is also high in fiber. A ½-cup serving of plain broccoli has 30 calories.

Selection

Broccoli is a bouquet of tiny flower buds. Each small green stalk is called a floret and contains hundreds of buds. Pick the head with the smallest buds. The color should be dark green with a purple or blue haze. Any heads that are yellowish and on their way to blooming should be avoided.

Storage

If broccoli stalks are long enough, plunge them upright into a container of water and refrigerate. Otherwise, store in plastic bags in the refrigerator crisper. (Cut small slits in bag to increase air circulation.)

Preparation

Cut the thick stalk and the florets to approximately the same size. If some florets are larger than others, cut them to match the rest. Broccoli can be boiled in a small amount of salted water or steamed over 1 to 2 inches of boiling water for 3 to 5 minutes, depending on size of pieces.

The method of food preservation that yields the best result for broccoli is freezing. Blanch uniform-size stalks for 3 minutes in boiling water or steam blanch for 5 minutes. Cool promptly in cold water and drain. Pack broccoli into containers, leaving no headspace. Seal and freeze.
