

A Glimpse Into the Future

Come Work and Play with UAF eLearning

WE WANT YOU. ALL OF YOU.

UAF eLearning isn't just for those involved in distance learning! We support faculty whether they are teaching face-to-face, online, hybrid or any other kind of course... some yet to be discovered. Please get in touch with us to chat with an Instructional Design professional (or three) whose working mission is to support you. You will find our contact information in the footer of this document.

ELEARNING INNOVATION

This year we are launching a shiny new Fellows program for the most advanced and curious faculty, while continuing to expand our offerings across the spectrum from one-hour presentations and discussions to our popular iTeach Clinics, all being constantly revised and with shifting schedules to allow you to work around your teaching and research.

We're hosting world-renowned experts in education and technology and facilitating conversations between you and your peers. And we continue to build new resources, such as our media maker's room, where you can easily record professional videos, podcasts and more, complete with green screen technology.

DISRUPTION

We work in a time of significant disruption in education. But disruption weakens—and in some cases eliminates—barriers that prevent us from doing new things. UAF eLearning has spent the last year working hard to bring innovation and solid pedagogy together while peering into the future. Augmented Reality, Google Glass, Mobile Learning, MOOCs, Curation...we've been exploring all of it to keep UAF ahead of the game. We can't do it without you!

THREATS AND OPPORTUNITIES

The same disruption that creates new opportunities creates threats. For example, MOOCs are everywhere we look. If we aren't aggressive in understanding them, they pose a significant threat to UAF and almost every other higher education institution. But UAF eLearning is on top of it, investigating how we can participate, defend ourselves, and carve out new opportunities for our faculty and students.

Let's Go!

My door, virtual and otherwise, is always open.
