

MSL 694: Chemical Coastal Processes

Instructor: Dr. Ana M. Aguilar-Islas
School of Fisheries and Ocean Sciences
335A Irving II
474-1524
amagularislas@alaska.edu

Class meeting times: TBA
Location: TBA
Office Hours: TBA

Prerequisites: Graduate standing.

Recommended: Chemical Oceanography (MSL 660)

Course Description

This course investigates chemical processes in the coastal ocean. We will examine chemical interactions at different boundaries, and gain an understanding of how physical and biological processes affect the chemistry of coastal environments. In addition to participation during lectures, students will be evaluated based on four homework assignments, a synthesis paper, an oral presentation, two midterms and a final.

Learning Objectives

1. Become familiar with chemical processes occurring in coastal/shelf waters.
2. Identify physical and biological controls affecting the distribution and behavior of chemical species.
3. Critically evaluate the direction of future coastal/shelf research.
4. Apply topics examined during lectures to Alaskan coastal waters

Course Policies and Requirements

Lecture **attendance** and active **participation** in class is expected from all students. Class participation will count for 10% of the final grade.

Email communication will be used to distribute class information, updates and changes.

Four **homework assignments** will be given. Collaboration among students is encouraged. However, each student is expected to submit their own work. Homework assignments will not be accepted after the due date, unless arrangements have been made in advance with the instructor.

Exams. There will be two midterms and one final which are to be completed during the regular class period. The exams will be closed-book, and will require short-essay and diagramed answers. The final exam will be comprehensive with an emphasis on material covered after the second midterm.

Background Readings. There is no required textbook. Reading assignments will come from several books and the primary literature. Chapters from textbooks will be found on eReserves (<http://eres.uaf.edu/eres/default.aspx>) PASSWORD: TBA. Primary literature articles will be obtained from the library (<http://library.uaf.edu/findarticles>). Contact the instructor or a librarian if you need help obtaining articles.

Synthesis Paper. Choose and investigate a well-defined, focused topic that will be written as a paper. You are to choose an Alaskan coastal region and synthesize 2 to 4 key journal articles on the particular chosen topic and write a synthesis overview.

1. Topics will be selected during the first week of April. You will need instructor approval before moving ahead. This is to ensure you are “on track” with a focused topic.
2. An outline with chosen references will be due on April 12
3. The paper will be due in class on April 26.
4. The body of the paper should have 1.5 line spacing, size 12 font (Time or Times New Roman) and 1 inch margins – it should be approximately 9 to 10 pages with appropriate figures and tables inserted into the text.
5. All tables and figures need to have proper headings or captions, and need to be properly referenced.
6. Reference format:
In the body of the text “The concept of new production (Eppley and Peterson, 1979) has provided valuable insight ...”
In the **Reference** section at the end of the paper:
“Eppley, R.W., and B.J. Peterson. 1979. Particulate organic matter flux and planktonic new production in the deep ocean. *Nature*, **282**: 677-680.”
7. The synthesis needs to be in your own words. It is OK to directly use a sentence from one of the articles as long as you use quotes and reference it properly.

Topic selection – remember that it has to be a focused paper from a **chemical coastal process perspective**. For example, a paper on trace metals in seawater is not acceptable, but a focused paper on sources of mercury in the Aleutian Archipelago would be acceptable. Similarly, a paper on organic matter in seawater is not acceptable, but a focused paper on input of organic matter by the Yukon River would be acceptable.

Student Presentations: All students will make an oral presentation of highlights from their synthesis paper. Presentations will take place during the last week of lecture (May 3rd and 5th).

Note

This is a stacked 400/600 level course. The material covered will be the same for both versions of the course. Undergraduate level students will be required to answer 4 out of 5 questions for each homework assignment and exam, while graduate students will be required to answer all questions. Undergraduate students will not be required to write a synthesis paper, nor will they be expected to be able to critically evaluate the direction of future coastal/shelf research at the end of the course.

Lack of **academic integrity** including plagiarism is not acceptable and will not be tolerated.

Points and grading scale

	Possible points	% of Total
Attendance and active class participation	50	10
Homework (4 assignments)	100	20
Midterm 1	75	15
Midterm 2	75	15
Paper/Presentation	100	20
Final	100	20
Total	500	100

A+	98-100%	A	93-97%	A-	90-92%
B+	87-89%	B	83-86%	B-	80-82%
C+	77-79%	C	73-76%	C-	70-72%
D+	67-69%	D	63-66%	D-	60-62%
		F	< 60%		

Support and Disability Services

At UAF, the Office of Disability Services (203 WHIT; 474-5655; TTY 474-1827; fydso@uaf.edu) ensures that students with physical or learning disabilities have equal access to the campus and course materials. If you have specialized needs, please contact this office or the instructor to make arrangements.

Lecture Schedule (Subject to change)

Week	Date	Lecture Topic	Assignment	Reading
1	1/20	Introductions, overview, logistics		
2	1/25	Coastal zone classification		Open University Ch. 5-8
	1/27	Chemical composition and mixing		
3	2/1	Residence time and input variability		Eyre, 1998
	2/3	Flocculation processes	hmw1 Due	Boyle et al., 1974; Sholkovitz, 1976
4	2/8	Organic speciation of trace metals	hwk1 returned	van den Berg, 2000; Buck et al., 2005
	2/10	The roll of Suspended particles		Turner and Millward, 2002
5	2/15	Photochemical Processes		Sulzberger, 2000
	2/17	Photochemical Processes (cont.)	hmw2 Due	Moran & Zepp, 2002
6	2/22	Midterm 1	hwk2 returned (2/21, office)	
	2/24	Carbonate system; Coastal Acidification	Midterm 1 returned	Emerson & Hedges Ch.4
7	3/1	Coastal Acidification (cont.)		Borges & Gypens, 2010
	3/3	Dissolved Oxygen; hypoxia/anoxia		Grantham et al., 2004
8	3/8	Interactions at sediment/water interface	hmw3 Due	Presley and Trefry 1980; Libes Ch.12
	3/10	Sedimentary transformation of organic matter		Artemyev Ch. 4
SPRING BREAK				

Week	Date	Lecture Topic	Assignment	Reading
9	3/22	Sedimentary transformation of trace metals	hmw3 returned	
	3/24	The role of bacteria		
10	3/29	The influence of sea ice		Melnikov Ch. 3
	3/31	Midterm 2		
11	4/5	Isotopes as tracers	Topic Due. Midterm 2 returned	Libes Ch. 5
	4/7	Isotopes as tracers (cont.)	hmw4 Due	Swarzenski et al., 2000
12	4/12	Upwelling, fronts and eddies review	Outline/References Due	
	4/14	Controls on coastal productivity	hmw4 returned	Alongi Ch 7
13	4/19	Controls on coastal productivity (cont.)		Hutchins et al., 1998
	4/21	Interdisciplinary coastal research		Oceanography, 21(4): 90-107,
14	4/26	Coastal Observing Systems	Paper Due	
	4/28	Future challenges and coastal management		Valiela Ch 14
15	5/3	Student Presentations		
	5/5	Student Presentations	Papers Returned	
16		Final Exam
